

## Operators & Owners

We support industrial and commercial, public and private fleets. Our services are perfect for everything including...

commercial and private aircraft, ground support equipment, cruise ships and luxury yachts, public transportation, railroads, farming equipment,...

...wind energy, mining and construction equipment, rental fleets, and military vehicles, aircraft, and equipment.

## Services & Analysis

We conduct wear debris analysis and particulate contamination testing on your industrial fluids to improve part lifetime and avoid costly, unscheduled downtime.

## Deliverables & Outcomes

By collecting and interpreting trending performance data for your fleet, we can build customized predictive maintenance schedules.

# Predictive Maintenance & Analysis

Gateway Analytical provides predictive maintenance services that quantify your fleet's performance in the unique operating environments you encounter each and every day. The data collected from wear debris and particulate matter analysis on your industrial fluids show performance trends over time, which can be used to create a predictive maintenance schedule optimized for your needs. That way, you can avoid costly unscheduled downtime and manage the lifetime of parts and fluids on your own terms.
